## 1 Project Idea

We have selected the *Assignment and Study Tracker* idea for our project. This app is envisioned as an integrative solution, tailored for students who are juggling multiple responsibilities and deadlines.

## 2 Scheduling and Planning Sybsytem

Central to the app's value proposition, this subsystem employs machine intelligence techniques and historical user interaction data to generate personalized study and assignment schedules. It optimizes study time, integrates breaks, and aims to adapt to the user's most productive timeframes and personal preferences.
